

# 7 Reasons Why?

to have window film installed...  
on your home or office.

## 1 Decrease Heat

Window film is the most efficient way to reduce unwanted solar heat transferring through your windows. It can provide up to 78% heat reduction versus untreated glass, while controlling hot spots and cooling off sun-drenched areas in your home or office.

## 2 Reduce Fading & Health Risks

Causes of Fading

Window film blocks up to 99%\* of UV rays, while also significantly reducing heat. This helps to protect your valuable furnishings from fading and provides a "sunscreen" for your skin against the harmful effects of the sun.

\*Our clear safety and security films block 98% or more of UV rays.

## 3 Cut Glare

Whatever the cause—direct sun, reflections from snow, water, or surrounding buildings—there is a perfect window film solution to help reduce annoying glare.

## 4 Enjoy Energy Savings

Reducing temperature imbalances caused by extreme sunlight is why so many designers, architects and building engineers desire window film. Reducing heat loss will increase HVAC efficiency and lower energy costs.

## 5 Increase Safety

Accidents, environmental effects and vandalism can instantly turn a pane of glass into life-threatening shards. Window film can act as a "safety net" by holding shattered glass together.

## 6 Enhance Appearance

Whether it's a contemporary look or a uniform design, there's a choice of window film products that can aesthetically compliment the exterior of a home or office building.

## 7 It's Fast & Easy

Professional installation is quick and simple. There's minimal disruption to one's daily lifestyle or work schedule.
